- Men's BAC Wheel on one side, Women's BAC Wheel on other side.
- Instantly compares the effects of alcohol on men and women.
- Calculates alcohol level based on number of drinks and body weight.
- Shows declining alcohol level hour by hour.
- Estimates based on Widmark Formula.
- Spanish version now available.

Our Men/Women Combo BAC Wheel is two BAC Wheels in one! One side shows the BAC Wheel for women. Flip the wheel over, and the second side shows the BAC Wheel for Men. We color-coded each side (blue for men, magenta for women) to grab the user's attention and to make the wheels easy and fun to use. Our new Spanish version men/women Combo Bac Wheel has been completely translated into Spanish.

These wheels make a great hands-on teaching tool for alcohol education programs. The wheels allow users to instantly see how alcohol affects women differently from men. The Combo BAC Wheel also includes a brief section on the scientific facts that explain why alcohol creates increased intoxication in women.

The Combo Wheels also make a great give-away item to promote alcohol awareness and safety. We can imprint your agency's name and message on the wheels so users can identify your agency as the source for this useful information. Please call for imprinting costs.

The wheels function like calculators to estimate alcohol levels based upon number of drinks, body weight, and time spent drinking. To use the BAC Wheel, the user turns the wheel to line up the number of drinks with his/her body weight. The upper window indicates the estimated alcohol level one hour after drinking. The lower window estimates the declining alcohol hour by hour for the next six hours after drinking. We based our calculations on the Widmark formula to ensure scientific accuracy.
