

Identify and Eliminate Drug & Alcohol Use at your Workplace

Pathtech are Australia's largest supplier of Saliva Detection Devices

Our Securetec DrugWipe is used by Australian Police for Roadside Drug Testing and is available for use at your Workplace

Why should you consider Saliva Drug Testing with the DrugWipe?

- > **Fastest Sample Collection** - the DrugWipe is the only device that requires a single wipe down the tongue to run - making it the fastest on the market (no saliva sucking sponge) and saving you costs in downtime.
- > **When Accuracy Counts** - Australia's most trusted saliva drug detection device due to its proven high accuracy. With negligible risk of false positives and, more importantly, negligible risk of false negatives.
- > **Fitness for Work** - the DrugWipe is less intrusive and detects the psychoactive drug that are present in the worker now, lessens the need for handling bodily fluids and delivers reliable results quickly.
- > **Dry Mouth - No Problems!** - the DrugWipe only requires minimal saliva (10ul) for the test to run successfully.
- > **Easy to Read** - DrugWipe is the ONLY drug test in the world which recognises the presence of drug substances by red test lines. Easy to read results! Other devices demonstrate presence of drugs with NO line, making it very ambiguous, difficult to read, and room for human error.
- > **Longest Shelf Life** - with up to a 24 month expiry, the DrugWipe is ideal for project based work, blanket testing, random testing, on-suspicion and post incident testing, because the devices will remain valid even if work fluctuates, again saving you costs by reducing the need to dispose of expired stock.
- > **Delivers Fast Results** - Without the need for a drug test reader (a reader is available for quantitative results).
